

PUMP PROTECTOR

WAK

Detects unusual pump operating conditions including dry-running and overload

The DRN model protects equipment (including pumps) from damage! Minimizes production downtime.

Identifies possible causes of alarms so they can be investigated and addressed.

Multiple Input ———	Two analog, one digital, one temperature input and one current input
Easy operation———	Equipped with EASY setup mode to remember the operation status and set the lower/upper limit values, as well as AUTO setup mode
Bar graph ———	Visible indication of current operating status
Logging capability ——	Data log feature for preventative maintenance scheduling
Communication ———	RS485 external communication capability

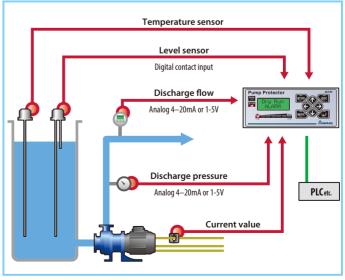

Specifications

Model	DRN-01	DRN-02	
Amperometric range	0.5-30.00A	5.0-200.0A	
Unit's source voltage	AC100–240V 50/60Hz 10VA		
Operating temperature	0-40°C		
Operating humidity	35–85%RH		
Current sensor	JS10FL	JS24FL	
Analog input 1	4–20mA or 1–5V		
Analog input 2	4–20mA or 1–5V		
Temperature range	-50–200°C (Pt100, K thermocouple)		
Digital contact input	No-voltage contact signal (also for external reset)		
Contact output	For pre-alarm: AC250V 8A (load resistance) 1c		
	For pump-stopping: AC25	60V 8A (load resistance) 1a	
Logging capability	Past records (with the calendar)		
Communication	RS485 incorporated		
Supported models	MX, SMX, MXM, MDM, MDE, MDW		
External dimension in mm	D71 x W108 x H90		

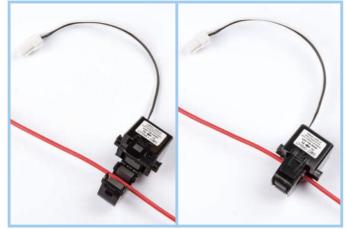

* EMC: EN61326-1 * RoHS: EN50581

* Safety: UL 61010-1 CAN/CSA-C22.2 No. 61010-1-12 EN61010-1 EN61326-1, EN50581

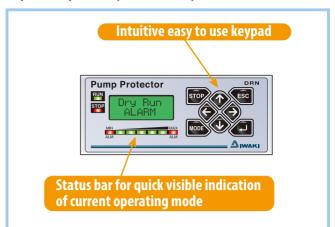

Clamp-type current sensor for ease of installation

No modification of motor leads necessary.

Improved operability and visibility

Normal operation : Green Signal Abnormal operation : Red Signal

Features

Item	Description
Input	1. Motor current measurement (DRN-01: 0.5–30.00A, DRN-02: 5.0–200.0A)
	2. Discharge pressure measurement (4–20mA or 1–5V)
	3. Analog measurement (4–20mA or 1–5V)
	4. Temperature measurement (-50–200°C K-thermocouple or platinum resistance temperature detector Pt100)
-	5. Digital contact input (for external reset, setup change or level sensor)
	1. EASY setup (set lower/upper limits based on the logged pump status at low/high flow rate)
Setup methods	2. AUTO setup (automatically set lower/upper limit based on normal pump status)
	3. MANUAL setup (manually set lower/upper limit)
Bar graph display	Visual indication of current pump operation within a programmed range
	The built-in calendar enables review of various items, including:
-	1. Time and cause of alarm (20 most recent alarms)
	2. Time of maintenance (10 most recent operations)
Log review	3. Cumulative operating time of a pump and a DRN device
-	4. Cumulative number of times MC relay and ALM relay are activated
-	5. Setting
	6. Model
Pre-alarm	When measured value exceeds the pre-alarm set value, a pre-alarm is issued before stopping the pump.
Pump-stopping output	When measured value is out of the lower/upper limit range, the pump shut off relay is activated.
Current offset	Offsets the measured current value.
Scaling	Changes the measurement range and unit.
Temperature offset	Offsets the measured temperature.
Maintenance time notice	Displays a notification that the device should be maintained.
Dual detection	Monitors motor current and discharge pressure. When an alarm is activated for either, displays the assumed cause. (LowFlow, OverLoad, DryRun, HighFlow)
Automatic cavitation detection	Automatically detects cavitation and issues a warning.
Communication	RS485 communication.
Other Features	Keypad lock, Initialization.
